

**Opening the way to an accessible future**

AllAccessAbility believes in bringing design and technology together to model personalized and inclusive ways of living.

**"Barriers can and must be overcome".**

**All Access Ability**, a company specializing in accessible design, was born from the experience of Elena and Marcello, parents of a blind child.

At AAA we believe in creating places where projects are intended for everyone and not for a particular category of users, but for men and women to live in a comfortable space.

Collaborating with the **Department of Medicine and Engineering of the University of Parma** and with leading companies in the sector allows us to adapt and create technologically innovative solutions that can respond to your needs.

Our services include design, product supply, consulting and training services to meet your accessibility and design needs.

**Each device and automation can be customized according to your needs.**

**Designing spaces that  
can be used by  
everyone means  
making flexible use of  
any hospitality  
environment.**

Driven by continuous research, we create environments where design and innovation come together to create universally appealing spaces. A better customer experience increases occupancy rates.

From check-in to designing the right access principles for restaurants, corridors and elevators, our team will walk you through the design and selection of the most appropriate products for any hospitality environment.

Our collaboration with the hotel industry has won us awards such as the "Customized Visit Award Celia Thomas Award".

Architect and judge ALAN STANTON, of award-winning architecture firm **STANTON WILLIAMS**, said of the project:

"I was particularly impressed with the attention they paid to the guest's journey through the reception and lobby areas, that are often overlooked by architects and contractors alike, and it's easy to think of them as merely transitory, but they can significantly enhance or disrupt a guest's experience, so it was exciting to see them highlighted and addressed with such care."
